OLCT 60

PB N°03-03.0 ENG

Components shortage

Dear Customers, Dear partners,

For several months, we have been facing difficulties in supplying critical components to manufacture some of our products. Recently we experience inability to source the microprocessors used to manufacture the main boards of our OLCT60 range, which leads us to review our product offer. We will suggest you the iTrans 2 to replace the Olct 60 for the following gas detection requests :

- LEL (HC), IR CO₂, CO, H₂S, NH₃, NO, NO₂
- For all other gases or for installations in zone 0, we will offer you the Olct60 until component stocks run out.

However this proposal does not meet your expectations, we have a wide detector range that will meet your needs according to your application.
